EDUCATION

Jaypee Institute of Information Technology — **Noida, India**
B.Tech, Information Technology — *2022 – 2026*
Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Object Oriented Programming

Vivekananda Public Senior Secondary School, Jodhpur *(RBSE Class XII: 96.8%)* — 2020 – 2021
Dunes Academy, Jodhpur *(RBSE Class X: 89.17%)* — 2018 – 2019

EXPERIENCE

Infosys Limited — **Mysore, India**
Digital Specialist Engineer (DSE) Trainee — *Jul 2026 – Present*

- Full-stack training in Java, Spring Boot, React and TypeScript: building and testing RESTful services and component-based UIs to industry coding standards.
- Delivering end-to-end modules from Spring Boot APIs to React/TypeScript frontends, using layered architecture, clean-code practices and Git-based version control.
- Working on projects and assessments that simulate real client delivery: requirement analysis, implementation, debugging and code review.

PROJECTS

TravelEase – Corporate Travel & Expense Management | *Java, Spring Boot, React, TypeScript, MySQL, JUnit* **2026**

- Built a microservices-based travel and expense platform with five independent Spring Boot services (Admin, Travel Request, Expense, Notification, Audit) behind a Spring Cloud Gateway, plus a responsive React/TypeScript UI.
- Developed REST APIs with Spring Data JPA and MySQL for travel requests, manager approvals, expense tracking and reimbursement through configurable approval workflows, secured with JWT authentication and role-based access control; audit trails record every request and expense decision.
- Wrote JUnit 5 unit tests for service-layer business logic and MockMvc tests for REST endpoints, covering approval, rejection and reimbursement flows.

SnapIt – Visual Knowledge & Smart Search Platform | *Java 21, Spring Boot 3, React, TypeScript, PostgreSQL* **2026**

- Built a full-stack knowledge management platform that centralizes webpages, images, PDFs, text and code snippets in one dashboard, so users can save, organize and retrieve scattered resources from a single place.
- Implemented DTO-based data transfer and a layered backend architecture using controllers, service interfaces, service implementations, and repositories to improve maintainability and separation of concerns.
- Developed Spring Boot REST APIs with Spring Data JPA and PostgreSQL for persistent storage, plus a Jsoup-based extractor that turns any saved URL into a title, description and readable text for searching.
- Designed the backend so OCR, auto-tagging and semantic search can be added without changing the core APIs.

Map Questor | *HTML, CSS, JavaScript, Data Structures and Algorithms* **2024**

- Built an interactive web tool that visualizes Dijkstra's algorithm, BFS and DFS for route finding on graphs, making it easier to see how each algorithm explores a graph and why it picks a path.
- Added an efficiency assessment of each algorithm across different graph scenarios, so learners can compare the trade-offs between Dijkstra's, BFS and DFS on the same route-finding problem.

TECHNICAL SKILLS

Languages: Java, C/C++, TypeScript, JavaScript, SQL, HTML, CSS
Frameworks & Tools: React, Spring Boot, REST APIs, MySQL, JUnit, Git

POSITION OF RESPONSIBILITY

- **Training and Placement Cell Coordinator (2024 – 2025):** Liaised between students and recruiters, ran campus placement drives and organized training sessions to improve interview readiness.

CODING PROFILES & ACHIEVEMENTS

- LeetCode: Knight badge; global rank 195 of 28,000 in Weekly Contest 431.
- Codeforces: Specialist (1480) | CodeChef: 3-star (1726) | GeeksforGeeks
- 3rd place in Knuth Cup 2024 organized by Knuth Programming Hub, HackerRank certified in Problem Solving (Basic and Intermediate).
